Variable Name:	CHNEED	**Length:** 1.0			**Position:** 1876

Question Name:

Concept: Core housing need indicator

Question Text:

Universe: All persons in non-farm households with incomes greater than zero and shelter-cost-to-income ratios less than 100%. Renters living in institutions, rooming/lodging houses, camps or mobile homes are excluded.

Note: A household in core housing need is one whose dwelling is considered unsuitable, inadequate or unaffordable and whose income levels are such that they could not afford alternative suitable and adequate housing in their community. Housing standards are defined as follows: a) adequate housing is reported by their residents as not requiring any major repairs; b) affordable housing has shelter costs equal to less than 30% of total before-tax household income; c) suitable housing has enough bedrooms for the size and composition of resident households according to the National Occupancy Standard (NOS) requirements. Note that households where the major income earner is a person not in an economic family aged 15 to 29 who attended school during the year are considered not to be in core housing need regardless of their housing circumstances. Attending school is considered a transitional phase, and low incomes earned by student households are viewed as being a temporary condition. Also note that the universe of this variable is no longer limited to households living in census metropolitan areas or census agglomerations.
